

COMMERCIAL FISHERIES FUNDAMENTALS II (MRT 106)

COMMERCIAL FISHERIES FUNDAMENTALS II (MRT 106)

Course Description:

- This course designed to continue the framework created in Commercial Fisheries Fundamentals I; but will be covering topics such as a study of basic marine economics, commercial fishing advocacy, and deepen the understanding of marine regulation and management.

Goals of course:

- To continue covering marine systems including a basic introductory exposure to electrical, hydraulic, diesel/gas, fluid flow/management systems used in both the marine and aquaculture fields.
- To provide a basis for starting to create a sustainable business model for the marine and aquaculture fields by exposing students to different methods used throughout the industry.
- To teach the role of advocacy in both the marine and aquaculture fields and understanding its involvement in the continuation of both industries.
- To further cover the State and Federal regulations that govern the commercial fisheries. Students will be exposed to the process(s) of applying for permits, grants, and other opportunities that are available.
